danicSecure™ PCs & MACs
for Windows & Mac PCs

Manage & secure access to data on employee Windows & Mac PCs

The **danicSecure™ Management System** is a single, configurable, web-based console with device modules that can be added in any mix or quantity for iPhone & iPads, Android devices, Windows & Mac PCs and USB storage devices. This unique system allows you to remotely secure the vulnerable devices in your organization - including those owned by employees.

There's more data here for thieves than any other mobile device. Additionally, industry, national, state and local regulations require encryption – and sometimes elimination – of all at risk consumer data. Still, many businesses fail to comply, leaving customers and employees vulnerable to identity theft, opening the possibility for legal problems, and allowing sensitive corporate information to escape.

Most software encryption solutions come at the expense of employee productivity. **danicSecure™** however, leverages resident OS tools. And why not? Using on-board encryption provides both compatibility and maximum efficiency – Microsoft, Apple and Google make sure of it! These tools are organizationally managed and user-transparent.

While encryption is necessary and generally effective at protecting hard drive data from hackers encryption alone can't be relied upon for complete data security. If a computer password is compromised (known or easily ascertained), or if a laptop is stolen with the power on and authenticated, encryption can't protect it. What then? **danicSecure™** cloud-managed architecture allows the organization to reach out to that device and, drawing on a variety of security measures, this innovative tool can ensure the data is safe. For example, the administrator might opt to remotely deny access (temporary "quarantine") to the data on a lost Windows PC or destroy completely the data on a stolen Mac.

danicSecure is the only web-managed endpoint security system that can enforce encryption and security policy - including wiping at-risk data - on Windows & Mac PCs, iPhones & iPads, Android mobility devices and USB Flash devices from one unified administration console.

Simple. Affordable. Secure.
